American HealthTech®

Experience Patient Driven Care in Real Time

Clinical decision support (CDS) provides clinicians, staff, or other individuals with knowledge and person-specific information, intelligently filtered or presented at appropriate times, to enhance patient care. CDS encompasses a variety of tools to enhance decision making in the clinical workflow. These tools include computerized alerts and reminders to care providers; clinical guidelines; focused patient data reports and summaries; documentation templates; diagnostic support, and contextually relevant reference information, among other tools.

- The Clinical Decision Support tool offers guidance to the clinician as care and documentation are done, allowing clinicians to use their critical thinking skills to adjust care as needed.

- This provides for less errors/omissions leading to quality care, better outcomes and patient and provider satisfaction.
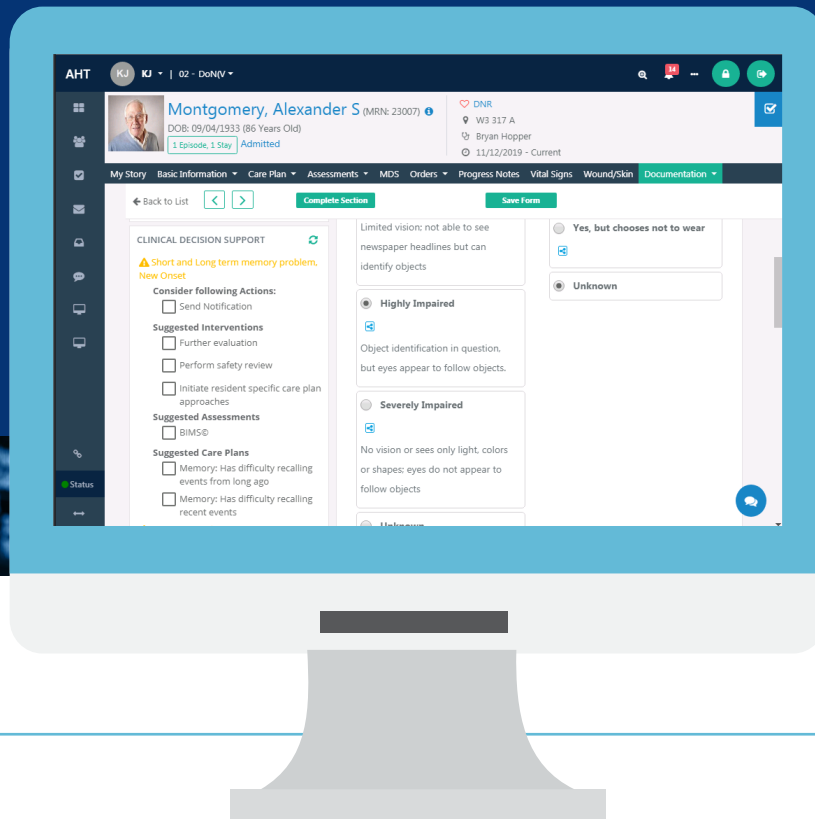

> ## PRODUCT BENEFITS:

- Increases quality of care and enhanced health outcomes.

- Avoidance of errors and adverse events.

- Improves efficiency, cost-benefit, and provider and patient satisfaction.

- Supports timely care and documentation across inter-disciplinary teams.

> ## PRODUCT EXPERIENCE:

- CDS prompting for needed interventions and care plans ensures consistent, quality care is provided and documented.

- Real-time and interactive treatment suggestions limit the risk of key interventions and notifications being missed.

- Experience care triggers tied directly to assessments and documentation.

- Physician Notifications within the workflow via HIPAA Compliant secure text.
